Schedule

Networks Schedule 2020 Spring		
1. week	Feb. 4. Tue	Feb. 6. Thu.
	Theory: Gergely Palla	Lab. session: Dániel Ábel
2. week	Feb. 11. Tue.	Feb. 13. Thu.
	Theory: Gergely Palla	Lab. session: Dániel Ábel
3. week	Feb. 18. Tue.	Feb. 20. Thu.
	Theory: Gergely Palla	Lab. session: Dániel Ábel
4. week	Feb. 25.Tue.	Feb. 27. Thu.
	Theory: Gergely Palla	Lab. session: Dániel Ábel
5. week	Mar. 3. Tue.	Mar. 5. Thu.
	Theory: Gergely Palla	Lab. session: Dániel Ábel
6. week	Mar. 10. Tue.	Mar. 12. Thu.
	Theory: Gergely Palla	Lab. session: Dániel Ábel
7. week	Mar. 17. Tue.	Mar. 19. Thu.
	Theory: Gergely Palla	Mid term test
Break	Mar. 24. Tue.	Mar. 26. Thu.
8. week	Mar. 31. Tue.	Apr. 2. Thu.
	Theory: Illés Farkas	Lab. session: Dániel Ábel
9. week	Apr. 7. Tue.	Apr. 9. Thu.
	Theory: Illés Farkas	Theory: Gergely Palla
10. week	Apr. 14. Tue.	Apr. 16. Thu.
	Theory: Gergely Palla	Lab. session: Dániel Ábel
11. week	Apr. 21. Tue.	Apr. 23. Thu.
	Theory: Gergely Palla	Lab. session: Dániel Ábel
12. week	Apr. 28. Tue.	Apr. 30. Thu.
	Theory: Gergely Palla	Lab. session: Dániel Ábel
13. week	May 5. Tue.	May 7. Thu.
	Lab. session: Dániel Ábel	Theory: András Vicsek
14. week	May 12. Tue.	May 14. Thu.
	Lab. session: Dániel Ábel	Term project presentations

Gergely Palla: Introduction to complex network theory

Dániel Ábel: Developing practical skills for network analysis

Illés J. Farkas: Financial applications of network theory

András Vicsek: Network theory in organisational consulting

Technical infos

Grading

Grading

- midterm test (60-90 min.), (30%)
- term project → presentation (30%)
- homeworks (lab sessions) (20%)
- activity during the lectures (20%)

Network Science 

[F](#) [T](#) [WRITE YOUR COMMENTS ON THE BLOGS](#)

The power of network science, the beauty of network visualization.

Network Science Book Project aims to produce an interactive textbook for network science. It is a work in progress, as we add chapters as they are finalized. Currently you will find Chapter 1-6, and we hope to have ten chapters by the end of the year. It is freely available under the Creative Commons licence for iPad and in pdf, together with the slides to teach the material. Feel free to offer feedback and follow its development on Facebook, Twitter or by signing up to our mailing list, so that we can notify you of new chapters and developments.

Technical infos

Reading material

Offline:

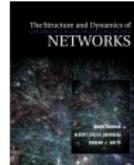

- J. F. F. Mendes and S. N. Dorogovtsev:
Evolution of Networks, (*Oxford University Press, Oxford, 2003*)

- A.-L. Barabási: **Linked** (*Perseus Books Group, 2002*)

- M. E. J. Newman, A.-L. Barabási, D. J. Watts:
The Structure and Dynamics of Networks
(*Princeton University Press, Princeton, 2006*)

WARNING!!!

Screen shot from theory coming up later...

- At the end of the network generation process $N = t$. The number of links between the neighbors of node l :

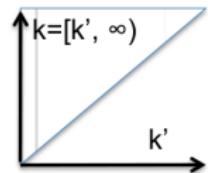

$$\begin{aligned} n_l &= \frac{1}{2} \sum_{t_i=1}^N \sum_{t_j=1}^N \mathcal{P}(l-i)\mathcal{P}(l-j)\mathcal{P}(i-j) \\ &= \frac{1}{2} \int_1^N dt_i \int_1^N dt_j \mathcal{P}(l-i)\mathcal{P}(l-j)\mathcal{P}(i-j) \\ &= \frac{m^3}{16} \int_1^N dt_i \int_1^N dt_j (t_l t_i)^{-\frac{1}{2}} (t_l t_j)^{-\frac{1}{2}} (t_i t_j)^{-\frac{1}{2}} \\ &= \frac{m^3}{16t_l} \int_1^N dt_i \frac{1}{t_i} \int_1^N dt_j \frac{1}{t_j} = \frac{m^3}{16t_l} (\ln N)^2. \end{aligned}$$

Screen shot from theory coming up later...

- The modified $\langle k' \rangle$ after the removal:

$$\begin{aligned}\langle k' \rangle &= \sum_{k'=0}^{\infty} k' p'(k') = \sum_{k'=0}^{\infty} k' \sum_{k=k'}^{\infty} p(k) \binom{k}{k'} f^{k-k'} (1-f)^{k'} = \\ &\sum_{k'=0}^{\infty} \sum_{k=k'}^{\infty} p(k) \frac{k(k-1)!}{(k'-1)!(k-k')!} f^{k-k'} (1-f)^{k'-1} (1-f)\end{aligned}$$

The sum is done over the triangle, thus, it can be replaced as $\sum_{k'=0}^{\infty} \sum_{k=k'}^{\infty} = \sum_{k=0}^{\infty} \sum_{k'=0}^k$

$$\begin{aligned}\langle k' \rangle &= \sum_{k=0}^{\infty} \sum_{k'=0}^k p(k) \frac{k(k-1)!}{(k'-1)!(k-k')!} f^{k-k'} (1-f)^{k'-1} (1-f) = \\ &(1-f) \sum_{k=0}^{\infty} k p(k) \underbrace{\sum_{k'=0}^k \binom{k-1}{k'-1} f^{k-k'} (1-f)^{k'-1}}_1 = (1-f) \langle k \rangle\end{aligned}$$

com·plex [adj., v. *kuhm-pleks*, *kom-pleks*; n. *kom-pleks*]

[Show IPA](#)

adjective

1. composed of many interconnected parts; compound; composite: *a complex highway system*.
2. characterized by a very complicated or involved arrangement of parts, units, etc.: *complex machinery*.
3. so complicated or intricate as to be hard to understand or deal with: *a complex problem*.

Complex system: Composed of interconnected parts that as a whole exhibit one or more properties (behavior among the possible properties) not obvious from the properties of the individual parts...

Quantum Mechanics: 1900

- electron microscope 1931,
- transistor 1947,
- laser 1957,
- magnetic resonance imaging 1973,

In general, about a **30 year gap** between science and technology.

In case of network science, this drops down to only about **3 years!**

The network
of Saddam Hussein.

Ace of Spades. One of the 55 cards the US military has handed out to the coalition forces in Iraq, each listing a top official to be captured following the country's 2003 invasion. The card shows the ace of spades, with the image of Saddam Hussein, Iraq's deposed president and dictator, the top prize of the hunt.

Motifs and communities

Graphs

Graph types

Graph

- vertices,
- edges,
- possibly directed,
- possibly weighted

Network

- nodes,
- links,
- node props.:
tags, annotations, state
variable $x_i(t)$,
- flows,
- epidemics,
- growth,
- rewiring

Graph vs. network

Graphs

Graph types

Graph types

- simple graph: only single connections are allowed, no self loops.
 - multi graph: multiple connections between the same pair of nodes are allowed, no self loops.
 - pseudo graph: multiple connections and self loops are also allowed.
-
- directed graph: the links are directed.
 - undirected graph: links are undirected.
 - (mixed graph: contains both directed and undirected links).
-
- weighted graph: links have weight
 - unweighted graph: links are “binary”
-
- bi-partite graph: two types of nodes, links are allowed only between opposite types.

Graph types

- The most basic 'role' or 'function' of a network is to provide indirect access for the nodes to other nodes in the system.
 - When we assume the sending of 'messages' or 'packets' over the network from one node to the other, the most simple scenario is to assume that these are performing a **random walk**.
- Let's examine random walking on a small network!
